

MY WORLD: Living things around you

Look around you, there are many different types of living things on this earth. We share our environment with the animals and plants *around us*, both wild and domestic. All living things are made up of cells and they perform three functions: Nutrition, Interaction and Reproduction. Wildlife is all around and varies from microscopic to over 30.5 m in length.

TASK

- Individually, make a small poster (A4) about some living things around you. You have to show in it what type of living thing is (animal or plant), characteristics, description, location etc.
- You have to show your work in class explaining to classmates your poster.

What living things can you identify walking in the city?

Do you have a pet?

Can you see a garden near your home?
